ARABIC RUNTIME ENVIRONMENT

There are 7 sub programs under this environment.

1- Arabic-English/English-Arabic Dictionary (More than 500 entries)
2- English-Arabic Dictionary (6600 entries)
3- Arabic-English Dictionary (5500 entries)
4- Slide
5- Arabic Falling Word Game
6- Arabic Verbs
7- Arabic Keyboard

HOWTO?

This program requieres Java/JRE1.5 at least. Look at your C: Program Files folder. Has it Java named folder? And has java folder jre* named sub folders?

If there is not java, you must install it from www.java.sun.com or from java.com or from any other server that gives java.

Now open the archive and enter the folder. Double click on arre.jar file. ıt is our application file.

If there is not any problem with java or with its settings you will see the program easily.

Otherwise use alternatives;

If you could not open the program by double clicking
on Executable-Jar File use these alternative ways;

Alternative run ways of the program;
1- Rename *runbat file like *run.bat and double click.
2- Rename *run2bat file like *run2.bat and double click.
3- Open jar file with "c:\progra~1\java\jre\bin\java" or
    with "c:\progra~1\java\jre\bin\javaw".

run2bat --> run2.bat
runbat --> run.bat

abcbat --> abc.bat etc.

if you could not open it by using alternative ways there
must be error about your java.

Probabilities are;
1- There is not java in your Operating System
2- There is very old java version is installed on your Operating System
3- The installed java on your Operating System is corrupted

4- The java settings of your System is corrupted.

Suggestions:
1- If you have not java install it from java.com freely or from any other resource.
2- If your java is very old you can uninstall old java from Control Panel/Add-Remove Programs"
and you can install new java from java.com freely or from any other resource.
3- If the java is corrupted try second way (uninstalling old java and installing new java).
4- If the settings are corrupted you can correct them. If you do not know anything about to do it, you can try 2. way (uninstalling old java and installing new java).

PS: These are our suggestions. You try them or not try them.
We will not accept any responsibility about this.

Notes:
You can use your computer like an Arabic Keyboard. Select Keyboard, open UTF-8 files and save your text like UTF-8. By using Arabic keyboard you can add new entries into the parts of the program.

Word Test gets the entries from veriutf folder.
Arabic-English Dictionary gets the entries from mndata folder
English-Arabic Dictionary gets the entries from otdata folder.

By using Arabic Keyboard you can add your words into the all files.

If you want to see screenshots, enter png folder.
