

AV Bros. Polaris Installation Guide

(Adobe® Creative Suite Extensions Set)

You are about to install **AV Bros. Polaris**, which is the *extensions set for Adobe® Photoshop® CS5 and higher* for 32/64 bit Mac OS X and Windows.

This set includes the following extensions:

- AV Bros. Guider Core
- AV Bros. Guider template
- AV Bros. Array
- AV Bros. Circumscriber

To be able to install and then, use this set of extensions, you should have installed both Photoshop CS5 or higher and Adobe Extension Manager CS5* on your system.

** Adobe Extension Manager CS5 (or higher) is the utility that was developed by Adobe to manage extensions (install, uninstall, enable and disable) created by 3rd Party developers. The Adobe Extension Manager is available as a free download from [Adobe website](#).*

Below you can find the installation instructions. Be aware that every time you want to install the AV Bros. Polaris extensions set, you install the trial version of the set. (The [activation](#) that converts the trial version of AV Bros. Polaris to the fully functional version is required, when you are going to use the full version of AV Bros. Polaris.)

Note! A single installation of AV Bros. Polaris extensions set allows you to install and then, use all the extensions included in this set. Moreover, if you use both the 32-bit and the 64-bit versions of Photoshop, then be informed that the single installation installs all the extensions to both versions of Photoshop.

1. Close Photoshop.
2. Double click on the **Polaris.zxp** file. This runs **Adobe Extension Manager**.
3. To continue, you need to accept the Adobe's Extension Disclaimer that appears. By accepting, you complete the installation**.
4. Start Photoshop and then, find all the extensions included in the AV Bros. Polaris set listed under the **Window > Extensions** menu.

*** If you use Windows 7 or Windows Vista and the Adobe Extension Manager prior to version 5.5, then, you may receive the notification that you cannot complete the task, due to limited rights on your system. If so, then you should quit Adobe Extension Manager and then, run it manually from your Windows "Start" menu **as Administrator**. (Right click on Adobe Extension Manager and then, choose the "Run as administrator" menu item.) Then, choose the **File > Install Extension** menu item in the Adobe Extensions Manager window and then, open the **Polaris.zxp**. Then, follow steps **3** and **4** from above.*
