

FOR IMMEDIATE RELEASE

Inspireon Software Releases ezWebReports

Innovative Application Provides an Affordable and Easy-to-Use Web-Based Reporting and Ad-Hoc Query Solution

Salt Lake City, Utah – October 8, 2003: Inspireon Software, LLC - a developer of innovative applications and software components that help companies solve critical Information Management challenges - today announced the release of ezWebReports, a powerful, affordable, and easy-to-use web-based reporting and ad-hoc query solution for the Microsoft ASP.NET platform.

"Many of the web-based reporting systems on the market today have become overloaded with too many features that most users just don't need, or don't have the time to learn," said Jon Holland, President of Inspireon Software. "The licensing costs for those systems have gone well beyond the reach of many businesses – particularly in these times of tight budgets – and they require a lot of IT effort to support and maintain. ezWebReports was designed from the ground-up to provide powerful, yet easy-to-use web-based reporting and ad-hoc query capabilities that companies can affordably deploy throughout their organization – while requiring a minimal amount of time and effort on the part of their already-overloaded IT group to support it."

With just a web browser, even the most novice users can use ezWebReports to easily design their own presentation-quality reports, apply ad-hoc query filters to the data without any knowledge of query languages or SQL, and generate the reports in a variety of popular formats (including viewing/printing the report in their browser, or downloading the report in Excel, Adobe Acrobat, Comma-Delimited, HTML, and XML formats). ezWebReports also includes powerful drill-down capabilities that let users start out at a high-level summary of analysis, and easily drill-down to the supporting detail with just a mouse click.

System Requirements

ezWebReports runs on the Microsoft ASP.NET platform, and requires the following web server software: Microsoft Windows 2000 or 2003 Server, or Microsoft Windows XP Professional; Internet Information Services; .NET Framework; ASP.NET.

ezWebReports supports the following web browsers for end-user access: Microsoft Internet Explorer version 5.5 and higher or Netscape Navigator version 6.1 and higher.

ezWebReports supports the following databases: SQL Server, Oracle, DB2 UDB, Sybase ASE, MySQL, and Access.

Pricing and Availability

ezWebReports is available immediately. Licensing for ezWebReports is on a per-server basis for each web server that the application is deployed on, with no per-user license fees for users accessing the application via their web browser. Pricing is just \$495 per server. A fully-functional Evaluation version can be downloaded from the company's website.
