

# Visual SQLTools 2010 Professional

## Common Database and SQL development tools

Ver 10.2.0

### ◆ Products

**Visual SQLTools 2010 Professional — Common Database and SQL development tools**, Supported 7 types of common database(Oracle, SQLServer, DB2, Sybase, MySQL, PostgreSQL, Access) and 11 kinds of international languages(English, Chinese, Japanese, French, German etc.). Based on .NET Framework 2.0 platform and .NET Data Provider to develop and complete. The present version took eight years to develop and test.

(1) Has many practical features with the original in the table structure view, field search, table data editing, test data generation, data import and export, SQL visual editing, executing , formatting, conversion ,Procedure Function edit debug etc. most commonly used database operations. For example: Project-based DB connection management mode, Tables, field's plural match and the entire database search, Record batch update feature. Differentiation of data import feature, Data Association feature, SQL comments add functionality, SQL and program code conversion etc.

(2) Has a strong secondary development function, provide a rich interface and underlying database support. Supports two modes of secondary development(Use C # or VB.NET programming, and XML configuration to achieve), Using XML configuration can easily generate realistic project standard SQL statements (supports multi-table related query), the program code (Java, VB.NET, C #, etc.), Using Programming can be achieved Complex functions such as create table statements, design documents, forms, report generation, or many other custom features.

## ◆ Flash Tutorials

A total of 16 Flash Tutorials can help you quickly understand and grasp all the operations.

Menu start: [Start]⇒[All Programs]⇒[Visual SQLTools 2010 Professional]⇒[SQLTools Pro Tutorials (FLASH) ]

Local path: [SQLTOOLS install folder] /Tutorials/Tutorial\_Menu.htm

No.	Functions	Length
1	Create DB connection and view the table structure.	00:03:35
2	Table of related operations.	00:03:10
3	Field of related operations.	00:02:10
4	Table data edit.	00:05:20
5	Data custom build and Data batch update.	00:03:00
6	Table schema, create/drop table statement export and data export/import.	00:02:00
7	SQL Visual Editor. (SQL Edit, Run ,Format, Conversion etc.)	00:08:45
8	SQL statement to generate action (1). (Single-table Select,Insert,Update,Delete statement)	00:03:00
9	SQL statement to generate action (2). (Multi-table Select statement)	00:05:45
10	Code & Document generation operation.	00:05:00
11	SQL statement custom build configuration operation.	00:07:00
12	Code custom builds configuration operation.	00:03:00

13	Secondary development(C# or VB.NET) and deployment.	00:08:00
14	Import DB design document (1). (For MS.Office.Excel) (When using the table/field logic name.)	00:03:35
15	Import DB design document (2). (For not MS.Office.Excel) (When using the table/field logic name.)	00:02:30
16	Import DB design document (3). (Use of customize develop, contain create table statement generate operations.) (When using the table/field logic name.)	00:05:30

## ◆ Purchase license

Visual SQLTools 2010 Professional is a shareware, trial 40 days.

SQLTools available for purchase with two support models.

### ①Basic Edition

1 year of FREE software upgrades, 2 year e-mail support, Not Support Customize.

### ②Premium Edition

1 year of FREE software upgrades, 3 year e-mail support, Support Customize.

### Pricing

Users	Basic Edition	Premium Support
1 - 4	\$90	\$120
5 - 9	\$80	\$110
10 - 49	\$70	\$100

50 -	\$60	\$90
------	------	------
